My Finding Problem Process

every others days i wondering "why do students with big dreams
struggle to start or keep going?"

Finding the Problem:

What do I do to find the problem?

USING MY OWN EXPERIENCE

The main reasons it leads to this problem...

- So for my last semester, I was overwhelmed by too many classes, homeworks and club activities. I created BIG plan, but I failed to execute my own plan.

The Excuses I make for myself

- So whenever I faced those BIG BACK problems, I was usually too tired and overwhelming. I excuse myself into not doing it by saying "I definitely doing that later, definitely doing that, blah blah blah bleh bleh bleh *Then Disappears*"

The Cycles I get in...

So I noticed that some days I studied intensely, but the next day I did absolutely NOTHING. And If I missed JUST ONE DAY, done, the guilt set in and I quit my goals for the entire week.

Conclusion:

- Losing the Big Picture: We focus heavily on small, daily tasks but we easily forget the overarching big goals we set for ourselves, which makes us late for B16 assignments
Minus TONS of points for me noooooo

Conclusion:

-Endless Distractions: We already know that we MUST and NEED to study, but the immediate and endless rewards, entertainment of video games and Social Media and far more appearing to us.

Conclusion:

- Relying on our "MOOD" we only study when we feel like it. Without established habits, our productivity crashes like the twin towers when our two motivation inevitably plane fades and emotions spikes crashes again.

Conclusion:

- Standard Tools Fail Our Expectations: Normal "To-do" apps are just static lists. They don't actually teach us how to change our behaviors or build grit

Ideation

priority, discipline, habit, grit, self-learning. merge together
creating the perfect "Behavioral Loop" to hack and trick our brain.

hey! watch it off! don't hack me!

5-Skill / 5 ways to not waste time

THE FIVE CORE

Here a scientific system to guide your brain ever day, without neding motivation.

Weekly Review

1. Onboarding (Step 1/3) - Set up Goals

90-day goal:

Students learn repeatedly every day and upgraded their English's score form 9 to 9.5 and talk more confidently.

Subject: English

Right now: 9

Goal: 9.5

Why did you choose this goal?

Because I want to talk more confidently and showed excellent academic results for future exam that i about to get.

90-DAY OBJECTIVE: Study regularly every day and improve your English score from 9.0 to 9.5.

1. Expected Outcomes (3 Key Results):

- Complete 3 English listening tests. (Hoàn thành 3 bài kiểm tra nghe).
- Master 3 advanced vocabulary words daily. (Làm chủ 3 từ vựng nâng cao mỗi ngày).
- Practice speaking for 15 minutes every morning. (Luyện nói 15 phút mỗi sáng).

2. Priority Focus Blocks (Schedule):

- Tue: 19:45 (20 mins)
- Thu: 19:45 (20 mins)
- Sat: 09:30 (25 mins)

3. Deliberate Practice Focus:

- Pronunciation: Record my voice and compare it with native speakers to fix ending sounds.

Q&A Time!

Why I choose 90 days?

1. The most Famous Research (UCL — 2010)

Pippa Lally 's scientific research (University College London) watch 96 people in 84 days

Results:

We need average of ~66 days to make action into "auto

But reality oscillate very large: 18 - 254 days

Which means:

There theoretical no perfect number
but about 2-3 months is the perfect choice

Why I choose 90 days?

1. Research on “deliberate practice” — Anders Ericsson

Ericsson (Florida State University) studied violin players, athletes, professionals...

Conclusion:

Skills develop through deliberate practice (deliberate practice)

Requires repetition with feedback over a long period

Related points:

There is no specific 90-day benchmark

But:

After a few months → reach a usable basic level

After many years → expert (10,000-hour rule)

Why I choose 90 days?

2. Research on the "learning curve"

Wright (1936) + many subsequent studies in cognitive science:

Performance improves in the form of:

Fast at first

Then gradually slows down (plateau)

Significance:

The first 2–3 months are usually the period:

The most noticeable progress

The easiest results → coincides with the "90 days"

Why I choose 90 days?

3. Research on neuroplasticity

fMRI studies (Draganski et al., 2004 — juggling):

After 3 months of training, brain structure changed significantly

This is a very interesting point:

90 days is not just psychological

But also physical changes in the brain

Why I choose 90 days?

4. Research on “behavior change stages”

(Prochaska & DiClemente)

The behavioral change model includes the following stages:

Awareness

Preparation

Action

Maintenance

In reality

The “action → maintenance” stage usually takes
several weeks to several months

Why I choose 90 days?

5. Research on consistency

Wood & Neal (2007) — habit formation:

Habits depend on:

frequency of repetition

stable context Definition

Meaning:

It's not that "90 days" create the skill

But rather:

90 days = enough repetitions for the brain to "remember"
